1. Context & concept

AI-driven automation (agents, autonomous workflows, robotics, RPA, decision systems) is reshaping production, services and labour markets.

A key emerging question for governments and enterprises is: **who controls the automation that drives economic activity?**

Automation sovereignty refers to:

The ability of a State, sector or enterprise to secure and govern its automation systems — robotics, workflow engines, AI agents, RPA, industrial automation — ensuring security, resilience, productivity, employment and strategic autonomy.

The concept appears in:

- future-of-work policy debates,
- Industry 4.0 strategies,
- analyses of SaaS dependency and automation risk,
- discussions on sovereign AI stacks and socio-economic resilience.

AutomationSovereignty.com provides the exact-match global banner for this topic.

2. Why this domain name is strategic

- Term already present in political, industrial and academic discussions.
 - Institutional wording suitable for boards, ministries, regulators and industry.
 - Premium exact-match .com asset, defensible if the concept becomes mainstream.
 - Fits naturally within the continuum:
 - **Compute Sovereignty** → compute power and infrastructure,
 - **Model Sovereignty** → AI model governance,
 - **Automation Sovereignty** → control over automated labour and workflows.
 - Reflects the real 2030 landscape: AI agents, autonomous production, labour transformation, dependency on automation providers.
-

3. Potential use cases

A. Global Automation Sovereignty Observatory

Mapping:

- automation levels by sector,
- dependency on foreign SaaS/RPA/AI agents,
- labour-market exposure,
- industrial 4.0 maturity,
- socio-technical risk factors.

B. Automation Sovereignty Index

A reference index for governments, institutions and industries assessing:

- dependency on automation platforms,
- resilience of production chains,
- socio-economic exposure,
- national/sectoral autonomy.

C. Public–private alliance hub

The domain can serve as a neutral banner for alliances including:

- industrial players,
- automation vendors,
- open-source ecosystems,
- ministries and labour institutions.

D. Umbrella brand for corporate or national programmes

Suitable for:

- responsible automation frameworks,
 - labour transition programmes,
 - social-dialogue initiatives,
 - white papers and governance models.
-

4. Natural candidate users

- Ministries of labour, industry, economy.
 - Industry 4.0 leaders (automotive, electronics, energy, logistics).
 - Automation / RPA / agentic AI providers.
 - Large enterprises reinternalising automation workflows.
 - Unions, employer organisations.
 - Think tanks on the future of work, productivity and sovereign AI.
-

5. Editorial positioning

Neutral, analytical, governance-oriented.

Suitable for multi-stakeholder work, policy frameworks, industrial programmes and socio-economic analysis.

6. Notice — domain status

AutomationSovereignty.com is an independent, descriptive .com domain name.

It is not a regulator, public authority, official standard or institutional position.

Any organisation adopting this domain must develop its own governance and ensure regulatory compliance.

No guarantee of adoption, performance or valuation is provided.
